

# Actions + No-Code

Currently ChatGPT OAuth is broken so I haven't been able to produce this lesson as planned:

<https://community.zapier.com/developer-discussion-13/chatgpt-oauth-state-invalid-why-trying-to-connect-zapier-actions-28944>

The screenshot shows a question post on the Zapier community forum. The post title is "ChatGPT OAuth state invalid why trying to connect zapier actions". It was posted 10 days ago, has 16 replies, and 423 views. The author is "Optimize for All", who is new and has 0 replies. The post content describes a problem where the user cannot connect Zapier actions to ChatGPT due to an "OAuth state invalid or not found" error. The user has followed the tutorial, deleted cookies, and tried different browsers (Microsoft Edge and Firefox) without success. The post ends with a thank you to the community. Below the post, there is an "OpenAI" tag, a notification that 5 people like the post, and interaction buttons for "Like", "Quote", "Subscribe", and "Share".

Once resolved, this lesson will cover how simple it is to create custom actions by connecting your GPT to Zapier.
