

GPTs with Actions Not Available on Android/iOS

No video on this one. Just a super-short notice that I wanted to make sure is hard to miss:

Current app store restrictions will not allow a GPT to work on Android or iOS apps if it has actions enabled.

You should still be able to access the GPT in a web browser, even on a mobile device however.

I dropped this in as its own lesson because it's likely to happen to you if you play with actions, but not a lot more to say on the topic.

Keep in mind that if you're building to monetize in the GPT Store, you've got to avoid actions until this gets updated/fixed. Mobile is just too large of a percentage of usage.
